

Company description

The Company aims to generate a regular and attractive level of income with low asset value volatility by investing in a diversified portfolio of public and private debt and debt-like instruments ('Debt Instruments'), of which at least 70% will be investment grade. Over the longer term, it is expected that the Company will be mainly invested in private Debt Instruments, which are those instruments not traded on a stock exchange. The Company currently proposes quarterly dividends at an annual rate of LIBOR plus 2.75% on NAV and targets LIBOR plus 4% over the longer term.

The Company has the ability to borrow up to 30% of net asset value although it is expected that it will primarily be managed without borrowing and typically any borrowings will not exceed 20% of net asset value. Any borrowings may magnify any gains or losses made by the Company.

Market review

In January and February, interest rates and corporate credit spreads continued the trend seen throughout 2019, grinding even tighter. Investor confidence in the UK was buoyed by the recent majority election victory for PM Boris Johnson and underpinned by the perception of improving economic conditions, supported by the UK PMI (Purchasing Managers Index) hitting a 16-month high.

By the end of February the 10 year gilt had tightened by a further c.40 bps from the level seen at the end of 2019 and the effective yield on the comparable BofA Sterling Corporate and Collateralised Index (UCOI) neared historical lows. A sudden spike in public credit spreads in the last week of February showed signs that COVID-19 concerns had begun to impact credit markets.

In March the COVID-19 pandemic truly took hold of financial markets, causing dislocation and effective collapse. Governments enforced the closure of all "non-essential" businesses leading to economies across the world grinding to a halt. The ensuing market sell-off was indiscriminate, with credit spreads widening at unprecedented speed as investors rushed to hold cash. This caused a depreciation in the value of debt instruments across all sectors, regardless of credit quality or duration. As a result, the NAV of the Trust as at the end of March was notably reduced.

Manager commentary

For the first half of the quarter, attractive assets were scarce to find and the Trust maintained cautious positioning with a large holding in high grade ABS and covered bonds.

At the beginning of March as credit markets began to turn, we were able to sell down some covered bonds and high grade ABS to raise additional cash which we looked to redeploy into longer-dated, fixed rate public bonds. The purchases of these bonds combined with depreciating asset prices caused the portfolio yield to spike to 5.4%, and both spread duration and WAL increased.

We purchased investment grade financial paper from across the capital structure, in a number of large banking names that we remain very comfortable on (HSBC, Barclays, Commerzbank, BNP). In the High Yield space we saw value in the better quality BB rated part of the market (Elis, IGT, Playtech, William Hill, Ziggo) as well as food retailer Iceland.

During the month our focus was on the public markets as private transactions were put on hold, with almost all lenders and borrowers awaiting some semblance of market stabilisation and the establishment of stable spread levels before re-engaging. That said, we have recently started to see some borrowers approaching us with attractive investment grade opportunities within the desired yield requirements of the Trust.

Outlook

Whilst the current global economic outlook remains highly uncertain, the resulting volatility in credit markets has created attractive investment opportunities. As the private market continues to adjust, our immediate focus is on the public market, continuing to adopt a measured approach in adding risk where we are sufficiently compensated for doing so, and positioning the portfolio to deliver increased yield over the longer term.

Just under a third of the portfolio is held in high grade ABS positions which have fallen in value despite being of strong credit quality. We are comfortable holding these assets at current levels but will look to rotate into higher yielding public bonds as market conditions allow.

Key information

Portfolio manager	Jeremy Richards
Portfolio manager tenure from	14 November 2018
Deputy portfolio manager	Adam English
Launch date	14 November 2018

Risks associated with the Company

The value of investments will fluctuate, which will cause share prices to fall as well as rise and you may not get back the original amount you invested. There is no guarantee that the Company's Investment Objective will be achieved.

The Company may be exposed to the possibility that a debtor will not meet its repayment obligations.

Changes in interest rates may adversely affect the market value of some of the Company's investments.

Debt Instruments may be repaid by issuers at short notice: as a result it may be difficult for the Company to reinvest capital at an attractive price or at all, which may affect it adversely.

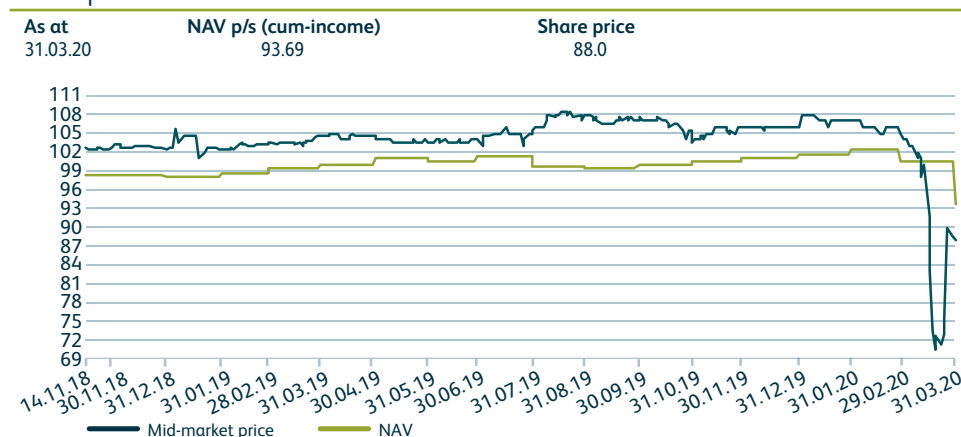

A variety of factors, such as market conditions, liquidity concerns or Company performance may lead to a reduction in trading volume or shares trading at a discount to their net asset value. Shareholders may also be unable to realise their investment at quoted market prices or at all.

Please note that this is not an exhaustive list. Please refer to the Risk section in the Prospectus.

This glossary provides an explanation of terms used in this quarterly review and in our literature.

Asset

Anything having commercial or exchange value that is owned by a business, institution or individual.

Asset Backed Security (ABS)

A security whose income payments and value are derived from and collateralized by a specified pool of underlying assets.

Asset class

Category of assets, such as cash, company shares, fixed income securities and their sub-categories, as well as tangible assets such as real estate.

Basis points (bps)

A common unit of measure for interest rates and other percentages in finance. One basis point is equal to 1/100th of 1%, or 0.01%, or 0.0001, and is used to denote the percentage change in a financial instrument.

Bond

A loan in the form of a security, usually issued by a government or company, which normally pays a fixed rate of interest over a given time period, at the end of which the initial amount borrowed is repaid.

Capital

Refers to the financial assets, or resources, that a company has to fund its business operations.

Capitalisation

The total market value of all of a company's outstanding shares.

Comparative sector

A group of funds with similar investment objectives and/or types of investment, as classified by bodies such as the Investment Association (IA) or Morningstar™. Sector definitions are mostly based on the main assets a fund should invest in, and may also have a geographic focus. Sectors can be the basis for comparing the different characteristics of similar funds, such as their performance or charging structure.

Consumer Prices Index (CPI)

An index used to measure inflation, which is the rate of change in prices for a basket of goods and services. The contents of the basket are meant to be representative of products and services we typically spend our money on.

Convertible bonds

Fixed income securities that can be exchanged for predetermined amounts of company shares at certain times during their life.

Corporate bonds

Fixed income securities issued by a company. They are also known as bonds and can offer higher interest payments than bonds issued by governments as they are often considered more risky.

Credit

The borrowing capacity of an individual, company or government. More narrowly, the term is often used as a synonym for fixed income securities issued by companies.

Credit Default Swaps (CDS)

Are a type of derivative, namely financial instruments whose value, and price, are dependent on one or more underlying assets. CDS are insurance-like contracts that allow investors to transfer the risk of a fixed income security defaulting to another investor.

Credit rating

An independent assessment of a borrower's ability to repay its debts. A high rating indicates that the credit rating agency considers the issuer to be at low risk of default; likewise, a low rating indicates high risk of default. Standard & Poor's, Fitch and Moody's are the three most prominent credit rating agencies. Default means that a company or government is unable to meet interest payments or repay the initial investment amount at the end of security's life.

Credit spread

The difference between the yield of a corporate bond, a fixed income security issued by a company, and a government bond of the same life span. Yield refers to the income received from an investment and is expressed as a percentage of the investment's current market value, and a bond is a fixed income security.

Default

When a borrower does not maintain interest payments or repay the amount borrowed when due.

Derivatives

Financial instruments whose value, and price, are dependent on one or more underlying assets. Derivatives can be used to gain exposure to, or to help protect against, expected changes in the value of the underlying investments. Derivatives may be traded on a regulated exchange or traded over the counter.

Developed economy / market

Well-established economies with a high degree of industrialisation, standard of living and security.

Dividend

Dividends represent a share in the profits of the company and are paid out to a company's shareholders at set times of the year.

Duration

A measure of the sensitivity of a fixed income security, also called a bond, or bond fund to changes in interest rates. The longer a bond or bond fund's duration, the more sensitive it is to interest rate movements.

Emerging economy or market

Economies in the process of rapid growth and increasing industrialisation. Investments in emerging markets are generally considered to be riskier than those in developed markets.

Episode

A phase during which investors allow their emotions to affect their decision making, which can cause financial markets to move irrationally.

Equities

Shares of ownership in a company.

Ex-dividend, ex-distribution or XD date

The date on which declared distributions officially belong to underlying investors.

Exposure

The proportion of a fund invested in a particular share/fixed income security, sector/region, usually expressed as a percentage of the overall portfolio.

Fixed income security

A loan in the form of a security, usually issued by a government or company, which normally pays a fixed rate of interest over a given time period, at the end of which the initial amount borrowed is repaid.

Floating rate notes (FRNs)

Securities whose interest (income) payments are periodically adjusted depending on the change in a reference interest rate.

Gearing

Is the level of a company's debt in relation to its assets.

Gilts

Fixed income securities issued by the UK government.

Government bonds

Fixed income securities issued by governments, that normally pay a fixed rate of interest over a given time period, at the end of which the initial investment is repaid.

Hard currency (bonds)

Refers to bonds denominated in a highly traded, relatively stable international currency, rather than in the bond issuer's local currency. Bonds issued in a more stable hard currency, such as the US dollar, can be more attractive to investors where there are concerns that the local currency could lose value over time, eroding the value of bonds and their income.

Hedging

A method of reducing unnecessary or unintended risk.

High yield bonds

Fixed income securities issued by companies with a low credit rating from a recognised credit rating agency. They are considered to be at higher risk of default than better quality, ie higher-rated fixed income securities but have the potential for higher rewards. Default means that a company or government is unable to meet interest payments or repay the initial investment amount at the end of security's life.

Index

An index represents a particular market or a portion of it, serving as a performance indicator for that market.

Index-linked bonds

Fixed income securities where both the value of the loan and the interest payments are adjusted in line with inflation over the life of the security. Also referred to as inflation-linked bonds.

Inflation

The rate of increase in the cost of living. Inflation is usually quoted as an annual percentage, comparing the average price this month with the same month a year earlier.

Investment Association (IA)

The UK trade body that represents fund managers. It works with investment managers, liaising with government on matters of taxation and regulation, and also aims to help investors understand the industry and the investment options available to them.

Investment grade bonds

Fixed income securities issued by a company with a medium or high credit rating from a recognised credit rating agency. They are considered to be at lower risk from default than those issued by companies with lower credit ratings. Default means that a company or government is unable to meet interest payments or repay the initial investment amount at the end of a security's life.

Investment trust

An investment trust is a form of collective investment found mostly in the United Kingdom. Investment trusts are closed-end funds and are constituted as public limited companies.

Issuer

An entity that sells securities, such as fixed income securities and company shares.

Leverage

When referring to a company, leverage is the level of a company's debt in relation to its assets. A company with significantly more debt than capital is considered to be leveraged. It can also refer to a fund that borrows money or uses derivatives to magnify an investment position.

LIBOR

The three-month GBP London Interbank Borrowing Rate is the rate at which banks borrow money from each other (in UK pounds) for a three-month period.

Liquidity

A company is considered highly liquid if it has plenty of cash at its disposal. A company's shares are considered highly liquid if they can be easily bought or sold since large amounts are regularly traded.

Local currency (bonds)

Refers to bonds denominated in the currency of the issuer's country, rather than in a highly traded international currency, such as the US dollar. The value of local currency bonds tends to fluctuate more than bonds issued in a hard currency, as these currencies tend to be less stable.

Long position

Refers to ownership of a security held in the expectation that the security will rise in value.

Macroeconomic

Refers to the performance and behaviour of an economy at the regional or national level. Macroeconomic factors such as economic output, unemployment, inflation and investment are key indicators of economic performance. Sometimes abbreviated to 'macro'.

Maturity

The length of time until the initial investment amount of a fixed income security is due to be repaid to the holder of the security.

Monetary policy

A central bank's regulation of money in circulation and interest rates.

Morningstar™

A provider of independent investment research, including performance statistics and independent fund ratings.

Near cash

Deposits or investments with similar characteristics to cash.

Net

The proportion of a fund invested in, for example, different sectors. Derivatives are included. The latter are financial instruments whose value, and price, are dependent on one or more underlying assets.

Net Asset Value (NAV)

A fund's net asset value is calculated by taking the current value of the fund's assets and subtracting its liabilities.

Non-Executive Director (NED)

A non-executive director is a member of a company's board of directors who is not part of the executive team. A non-executive director typically does not engage in the day-to-day management of the organization, but is involved in policymaking and planning exercises.

Options

Financial contracts that offer the right, but not the obligation, to buy or sell an asset at a given price on or before a given date in the future.

Overweight

If a fund is 'overweight' a stock, it holds a larger proportion of that stock than the comparable index or sector.

Payment date

The date on which distributions will be paid by the fund to investors, usually the last business day of the month.

Important information

This financial promotion is issued by M&G Alternatives Investment Management Limited which is authorised and regulated by the Financial Conduct Authority. This communication is only intended for and will be only distributed to persons resident in jurisdictions where such distribution or availability would not be contrary to local laws or regulations. The registered office and principal place of business of the Company is Beaufort House, 51 New North Road, Exeter EX4 4EP. The Company was incorporated with the name M&G Credit Income Investment Trust plc in England and Wales on 17 July 2018 with registered number 11469317.

Physical

The fund's exposure excluding derivatives, which are financial instruments whose value, and price, is dependent on one or more underlying securities.

Private

Refers to assets that are not listed or traded on a recognized exchange.

Public

Refers to assets that are listed on and can be traded on a recognized exchange.

REIT (Real Estate Investment Trust)

A REIT is a company that owns, operates or finances income-producing real estate.

Retail Prices Index (RPI)

A UK inflation index that measures the rate of change of prices for a basket of goods and services in the UK, including mortgage payments and council tax.

Securitise/Securitisation

The creation and issuance of tradable securities, such as bonds, that are backed by the income generated by an illiquid asset or group of assets. By pooling a collection of illiquid assets, such as mortgages, securities backed by the mortgages' income payments can be packaged and sold to a wider range of investors.

Short position

A way for a fund manager to express his or her view that the market might fall in value.

Short-dated corporate bonds

Fixed income securities issued by companies and repaid over relatively short periods.

Short-dated government bonds

Fixed income securities issued by governments and repaid over relatively short periods.

Spread duration

A measure of the portfolio's sensitivity to changes in credit spreads.

Sub-investment grade bonds

Fixed income securities issued by a company with a low rating from a recognised credit rating agency. They are considered to be at higher risk from default than those issued by companies with higher credit ratings. Default means that a company or government is unable to meet interest payments or repay the initial investment amount at the end of a security's life.

Swap

A swap is a derivative contract where two parties agree to exchange separate streams of cashflows. A common type of swap is an interest rate swap to hedge against interest rate risk.

Synthetic inflation-linked bonds

Refers to securities created using a combination of assets to simulate the characteristics of inflation-linked bonds. By buying inflation-linked government bonds and selling protection against companies defaulting on their debts, using credit default swaps, the combined synthetic investment will behave similarly to a physical inflation-linked bond, had one had been issued. Synthetic inflation-linked bonds are usually created where a company does not have any inflation-linked bonds in issue.

Total return

The term for the gain or loss derived from an investment over a particular period. Total return includes income (in the form of interest or dividend payments) and capital gains.

Valuation

The worth of an asset or company based on its current price.

Volatility

The degree to which a given security, fund, or index rapidly changes. It is calculated as the degree of deviation from the norm for that type of investment over a given time period. The higher the volatility, the riskier the security tends to be.

Weighted Average Life (WAL)

The asset-weighted average number of years to final maturity of the portfolio, based on the final maturity for all assets/exposures.

Yield

This refers to either the interest received from a fixed income security or to the dividends received from a share. It is usually expressed as a percentage based on the investment's costs, its current market value or its face value. Dividends represent a share in the profits of a company and are paid out to the company's shareholders at set times of the year.

Yield to maturity

The total return anticipated on the portfolio if the underlying bonds are held until maturity.
