Authorised Corporate Director's Report

The Authorised Corporate Director (ACD) of M&G Investment Funds (4) presents its interim report and unaudited financial statements for the six months ended 30 April 2024.

The unaudited financial statements of M&G Investment Funds (4), the Authorised Corporate Director's Reports including the portfolio statements, financial highlights and the unaudited financial statements and notes of each sub-fund are presented in their individual sections of this report as set out in the contents page.

Please note that an explanation of key investment terminology is available on our website at mandg.com/private-investor/glossary. A printed copy of the glossary is available upon request by calling customer services and administration as shown within the 'Investor information' section of this report.

Company information

M&G Investment Funds (4) is an umbrella Open-Ended Investment Company (OEIC) and contains seven sub-funds, hereinafter referred to as 'funds' in the rest of this report. The Company is a non-UCITS Retail Scheme (NURS) and, for the purposes of the AIFMD, qualifies as an alternative investment fund (AIF), as issued (and amended) by the Financial Conduct Authority (FCA). This OEIC is an Investment Company with Variable Capital (ICVC) incorporated under the Open-Ended Investment Companies Regulations 2001. It is authorised and regulated by the FCA under the Financial Services and Markets Act 2000.

The Company was authorised on 20 February 2002 and was launched on 20 June 2002. The M&G Episode Allocation Fund was launched on 16 February 2007. The M&G Sustainable Multi Asset Fund was launched on 14 February 2019. The M&G Sustainable Multi Asset Balanced Fund, M&G Sustainable Multi Asset Cautious Fund and M&G Sustainable Multi Asset Growth Fund were launched on 8 December 2020.

The Company's principal activity is to carry out business as an OEIC. The Company is structured as an umbrella company, and different funds may be established by the ACD from time to time with the agreement of the

Depositary and approval from the FCA. The funds are operated separately and the assets of each fund are managed in accordance with the investment objective and policy applicable to that fund.

As at 30 April 2024, none of the funds held shares of the other funds within this OEIC.

A shareholder is not liable for the debts of the Company and will never be liable to make any further payment to the Company after paying the purchase price of the shares.

Annual value assessment

An annual assessment report is available which shows the value provided to investors in each of M&G's UK-based funds. The assessment report evaluates whether M&G's charges are justified in the context of the overall service delivered to its investors. The latest report to 31 March 2023 can be found on our website at mandg.com/investments/valueassessment

Climate-related Financial Disclosures (TCFD)

We have produced TCFD reports in compliance with the FCA's rules on climate-related financial disclosures. The TCFD fund reports are designed to help you understand the impact these funds have on the climate and equally how climate change could influence the performance of these funds. The reports will also give you the ability to compare a range of climate metrics with other funds. To understand the governance, strategy and risk management that M&G has in place to manage the risks

and opportunities related to climate change, please refer to the M&G Investments Management TCFD report.

These reports are available via the Sustainability Disclosures page on our website at mandg.com/footer/sustainability-disclosures

Important information

The events in Ukraine continue to bring uncertainty. The ACD continues to monitor the associated risks that are posed to the Company.

Please refer to the 'Investment review' section for further details on significant events during the period. Investment reviews may become quickly outdated in relation to ongoing economic and geopolitical events.

Investor information

The Prospectus, Instrument of Incorporation, Key Investor Information Documents, costs and charges illustration, the latest annual or interim investment report and financial statements as well as a list of purchases and sales are available free of charge on request from the following address. The Instrument of Incorporation can also be inspected at our offices or at the office of the Depository.

Authorised Corporate Director's Report

Authorised Corporate Director's Responsibilities

The Authorised Corporate Director (ACD) is required to prepare annual and interim reports for the Company. The ACD must ensure that the financial statements, contained in this report, for each of the funds are prepared in accordance with the Investment Association Statement of Recommended Practice for Financial Statements of UK Authorised Funds (SORP) and UK Financial Reporting Standards, and give a true and fair view of the net revenue or expenses and net capital gains or losses for the accounting period, and the financial position at the end of that period.

The ACD is required to keep proper accounting records, and to manage the Company in accordance with the Collective Investment Schemes sourcebook, as issued (and amended) by the FCA, the Instrument of Incorporation and the Prospectus, and to take reasonable steps for the prevention and detection of fraud or other irregularities. Additionally, the ACD is responsible for preparing the financial statements on a going concern basis unless it is appropriate to presume that the Company will not continue in operation.

Directors' statement

This report has been prepared in accordance with the requirements of the Collective Investment Schemes sourcebook, as issued and amended by the FCA.

M&G Securities Limited
26 June 2024

Financial statements and notes

The financial statements for M&G Investment Funds (4) comprise the individual financial statements for each fund and the notes below.

Notes to the financial statements

Accounting policies

There are no material events that have been identified that may cast significant doubt on the Company's ability to continue as a going concern for at least the next twelve months from the date these financial statements are authorised for issue. The ACD believes that the Company has adequate resources to continue in operational existence for the foreseeable future and they continue to adopt the going concern basis in preparing the financial statements. The ACD has made an assessment of each fund's ability to continue as a going concern which is made as at the date of issue of these financial statements and considers liquidity, declines in global capital markets, investor intention, known redemption levels, expense projections and key service provider's operational resilience.

The interim financial statements have been prepared on the same basis as the audited financial statements for the year ended 31 October 2023. They are prepared under the historical cost convention, as modified by the revaluation of investments, and in accordance with the Statement of Recommended Practice (SORP) for Authorised Funds issued by the Investment Association in May 2014 and amended in June 2017.

Authorised Corporate Director's Report

For the purposes of these financial statements, the Prospectus dated 26 April 2024 has been used.

Investment objective

The fund aims to deliver a total return (the combination of capital growth and income) of at least 5% per annum above the Sterling Overnight Index Average (SONIA), before any charges are taken, over any five-year period.

There is no guarantee that the fund will achieve a positive return over five years, or any other period, and investors may not get back the original amount they invested.

Investment policy

The fund is a multi-asset fund that invests across a range of asset classes, including equities, fixed income securities, convertibles, cash and near cash. Exposure to these assets may be gained either directly or indirectly via collective investment schemes or derivatives. The fund may also invest indirectly via collective investment schemes or derivatives in other asset classes such as property and gold.

The currency exposure of the fund will be actively managed, seeking to enhance returns, with a minimum of 30% of the fund exposed to sterling and a minimum of 60% in developed market currencies (including sterling).

Over 35% of the fund's assets may be invested in government and other public securities issued by any one of:

- the government of the United Kingdom (including the Scottish Administration, the Executive Committee of the Northern Ireland Assembly and the National Assembly of Wales);

- the governments of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain and Sweden;
- the governments of Australia, Canada, Japan, New Zealand, Switzerland, USA;
- Eurofima, European Economic Community, European Bank for Reconstruction and Development, European Investment Bank, International Bank for Reconstruction and Development, International Financial Corporation.

Derivatives may be used for investment purposes, efficient portfolio management and hedging.

Investment approach

The fund managers have a flexible top-down approach to the allocation of capital between different types of assets in response to changes in economic conditions and asset values. This approach combines in-depth research to work out the value of assets over the medium to long term, with analysis of market reactions to events to identify investment opportunities. In particular, the managers seek to respond when asset prices move away from a reasonable sense of 'fair' long-term value due to market reactions to events.

The fund seeks to manage risk by investing globally across multiple asset classes, sectors, currencies and countries. The fund will typically invest 20-60% of its assets in equities and convertibles, 30-75% in fixed income securities or cash, and up to 20% in other assets. These allocations reflect the net exposure of the portfolio.

The fund will typically take investment positions at index or sector level, but it may also take positions in individual shares or bonds. The fund's investment strategy may involve the use of derivatives to take long or short positions.

Authorised Corporate Director's Report

Benchmark

SONIA + 5%

The fund is actively managed. The benchmark is a target which the fund seeks to achieve. The rate has been chosen as the fund's target benchmark as it is an achievable performance target given the fund's investment policy. The target benchmark is used solely to measure the fund's performance objective and does not constrain the fund's portfolio construction.

For each share class the benchmark will be a cash rate of the relevant share class currency. The benchmark for each share class will be shown in its respective KIID.

Risk profile

For details of the risks associated with this fund, please refer to the Prospectus.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Investment review

For the six months ended 30 April 2024

Performance against objective

Over the review period, the M&G Episode Allocation Fund produced a positive total return (the combination of income and growth of capital) and was ahead of its

benchmark*, the Sterling Overnight Index Average (SONIA) + 5.0%, across all of its share classes. The benchmark returned +5.2% over the period. SONIA reflects the average interest rate that banks pay to borrow sterling overnight from other financial institutions.

The fund's objective is to achieve a total return of at least 5% per annum above the 3-month SONIA, before any charges are taken, over any five-year period. Over five years, the fund produced a positive return but did not meet its objective. The annualised five-year return for the benchmark was 6.8% over the period.

For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Financial highlights' section of this report.

* Prior to 20 July 2021 the benchmark was to 3-month GBP LIBOR + 5%. Thereafter it is 3-month SONIA + 5%.

Performance review

The six month period under review saw very strong equity market performance overall, with US, Japanese and European shares all registering double digit returns. In emerging markets, a notable laggard was China, as investors fretted over weakness in its economy. Bond markets also recorded positive returns, with investors favouring corporate and emerging market sovereign debt, over developed market government bonds.

The final two months of 2023, saw a powerful rally in bond and equity markets. Following encouraging inflation data and indications of a 'policy pivot' to rate cuts by the US Federal Reserve, the US 10-year Treasury yield fell sharply in November and December. Other core sovereign bond markets, including the UK and Germany also enjoyed significant rallies, as did emerging market sovereign bonds. The rebound in government bonds, together with increasing risk appetite, was reflected in good performance from corporate bonds as well.

Alongside falling bond yields, equities also began to climb from late October as investor risk appetite improved and by the end of 2023, the MSCI AC World Index had recorded its best annual return since 2019.

Authorised Corporate Director's Report

However, the fortunes of equities and bonds diverged in the first quarter of 2024. While global equity markets recorded solid gains (partly driven by continued investor appetite for artificial intelligence-related stocks), the rally in bond markets at the end of 2023 faded, as investors pushed back the timing of interest rate cuts by central banks. Bond yields rose in January and February before recovering somewhat in March (bond yields rise as bond prices fall).

In general, both equities and bonds were weaker in April. This was mainly due to growing evidence of sticky US inflation, which raised questions as to whether the US Federal Reserve would be able to cut rates this year.

Shifting rate expectations led to US dollar strength versus most currencies, notably the Japanese yen, which hit a multi-decade low.

Against this backdrop, the fund delivered a positive return and outperformed its benchmark over the period under review. Our allocation to equities was the main driver of performance with exposure to European, UK, US, Japanese and Asian stocks proving particularly beneficial.

Fixed income exposure also aided performance, with developed market government bonds (principally long-dated US Treasuries and UK gilts), emerging market sovereign bonds (particularly from Mexico) and corporate bonds all contributing to gains.

Investment activities

In November, we added to equity exposure (US, UK and South Korea) in response to declines in prices caused by pressure from rising bond yields. Later in the month, we reduced fixed income exposure, responding to a rapid decline in developed market government bond yields. This removed the capital added to the long-end in early October.

In early 2024, we added modestly to China exposure, responding to material price weakness, with valuations looking increasingly attractive, in our view, and price action increasingly episodic given the rapidity of declines. Strong subsequent absolute and relative

performance has unwound the most episodic price action, so exposure was reduced toward the end of the period.

In March, we increased global equity exposure and reduced our position in Japanese equities, keeping our aggregate equity target unchanged. In fixed income, we increased the fund's long-dated UK gilt position and trimmed holdings in Mexican and South African bonds. We also moved to a long position in Japanese yen, which is at a multi-decade low versus the US dollar.

Outlook

The valuation of risk assets, signs of return-seeking behaviour, and a general lack of volatility suggest that investors are far more comfortable with risk than they have been for much of the past two years. One notable exception to this relaxed sentiment has been the Chinese equity market, which has displayed signs of panic, and provided an investment opportunity for the fund in January 2024. After several years of extremely surprising macro and market developments, similar tactical opportunities for the fund could emerge should the current consensus be shocked again.

Equity valuations in the US look demanding in aggregate, although not detached from fundamentals and recent robust earnings announcements, and could be vulnerable to either higher interest rates or weaker growth. As a result the portfolio ended the period with a preference for regionally diversified equity exposure outside the US.

Within fixed income, the pricing of US and other government bonds also suggests that prevailing sentiment is unconcerned about either the risks of further increases in inflation, or a material decline in future economic growth. In the case of the latter, current high real yields suggest that there is scope for fixed income assets to do well should the current growth optimism be challenged. Developed market bonds therefore have the potential to offer portfolio insurance if growth disappoints, whilst emerging market sovereign bonds offer attractive real and nominal yields, in our view. Cash real yields are elevated and attractive and uncorrelated with other asset

Authorised Corporate Director's Report

classes. Its liquidity, provides flexibility to respond to tactical opportunities.

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

As different share classes have different attributes, for example charging structures and minimum investments, please be aware that their performance may be different.

For additional information, including monthly fund commentaries, fund facts, historic prices, distribution rates, performance information (including a range of performance graphs) and other documents, please visit our website at mandg.com/investments

Long-term performance by share class

To give an indication of the performance of the fund, the following table shows the compound rate of return, per annum, over the period. Calculated on a price to price basis with income reinvested. Please refer to 'Comparative tables' for the share class launch dates.

Share class	Six months % ^a	Three years % pa	Five years % pa	Ten years % pa

Financial statements and notes

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 4.

Distribution policy

In determining the amount available for distribution to Income shares, the annual charge is offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Authorised Corporate Director's Report

For the purposes of these financial statements, the Prospectus dated 26 April 2024 has been used.

Investment objective

The fund aims to provide a higher total return (the combination of capital growth and income) net of the ongoing charge figure, than the average return of the IA Mixed Investment 40-85% shares sector over any five-year period.

Investment policy

The fund is a multi-asset fund that invests across a range of asset classes, including equities, fixed income securities, convertibles, cash and near cash. Exposure to these assets may be gained either directly or indirectly via collective investment schemes or derivatives. The fund may also invest indirectly via collective investment schemes or derivatives in other asset classes such as property and gold.

The currency exposure of the fund will be actively managed, seeking to enhance returns, with a minimum of 25% of the fund exposed to sterling and a minimum of 50% in developed market currencies (including sterling).

Derivatives may be used for investment purposes, efficient portfolio management and hedging.

Investment approach

The fund managers have a flexible top-down approach to the allocation of capital between different types of assets in response to changes in economic conditions and asset values. This approach combines in-depth research to work out the value of assets over the medium to long term, with analysis of market reactions to events to identify investment opportunities. In particular, the managers seek to respond when asset prices move away from a reasonable sense of 'fair' long-term value due to market reactions to events.

The fund seeks to manage risk by investing globally across multiple asset classes, sectors, currencies and

countries. The fund will typically invest 40-85% of its assets in equities and convertibles, 15-50% in fixed income securities and cash, and up to 10% in other assets. These allocations reflect the net exposure of the portfolio.

The fund will typically take investment positions at index or sector level, but it may also take positions in individual shares or bonds. The fund's investment strategy may involve the use of derivatives to take long or short positions.

Benchmark

IA Mixed Investment 40-85% shares sector

The benchmark is a target which the fund seeks to outperform. The sector has been chosen as the fund's benchmark as the fund is a constituent of the sector. The benchmark is used solely to measure the fund's performance and does not constrain the fund's portfolio construction.

The fund is actively managed. The fund managers have complete freedom in choosing which investments to buy, hold and sell in the fund.

For each share class the benchmark will be denominated or hedged into the relevant share class currency. The benchmark for each share class will be shown in its respective KIID.

Authorised Corporate Director's Report

Risk profile

For details of the risks associated with this fund, please refer to the Prospectus.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Investment review

For the six months ended 30 April 2024

Performance against objective

Over the review period, the M&G Episode Growth Fund produced a positive total return (the combination of income and growth of capital) across all its share classes. Returns for all classes also surpassed the benchmark IA Mixed Investment 40-85% Shares Sector, which recorded a gain of 12.2%.

Over five years, the fund produced a positive return, broadly in line with the benchmark*, which delivered an annualised return of 6.0%. Most of the share classes, with the exception of the GBP 'A' Accumulation and GBP 'A' Income share classes, met their objective of providing a higher total return, net of the ongoing charge figure, than the average return of the IA Mixed Investment 40-85% Shares Sector over any five-year period. Both the GBP 'A' Accumulation share class and the GBP 'A' income share class returns were just behind the benchmark.

For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Financial highlights' section of this report.

* The benchmark prior to 10 December 2019 was a composite index comprising 2/3 MSCI ACWI Index and 1/3 Bloomberg Barclays Global Aggregate Index. From 10 December 2019 to 1 February 2021 the Bloomberg Barclays Global Aggregate Index was changed to the GBP Hedged version. Thereafter, the benchmark is the average return of IA Mixed Investment 40-85% Shares sector.

Performance review

The six month period under review saw very strong equity market performance overall, with US, Japanese and European shares all registering double digit returns. In emerging markets, a notable laggard was China, as investors fretted over weakness in its economy. Bond markets also recorded positive returns, with investors favouring corporate and emerging market sovereign debt, over developed market government bonds.

The final two months of 2023, saw a powerful rally in bond and equity markets. Following encouraging inflation data and indications of a 'policy pivot' to rate cuts by the US Federal Reserve, the US 10-year Treasury yield fell sharply in November and December. Other core sovereign bond markets, including the UK and Germany also enjoyed significant rallies, as did emerging market sovereign bonds. The rebound in government bonds, together with increasing risk appetite, was reflected in good performance from corporate bonds as well.

Alongside falling bond yields, equities also began to climb from late October as investor risk appetite improved and by the end of 2023, the MSCI AC World Index had recorded its best annual return since 2019.

However, the fortunes of equities and bonds diverged in the first quarter of 2024. While global equity markets recorded solid gains (partly driven by continued investor appetite for artificial intelligence-related stocks), the rally in bond markets at the end of 2023 faded, as investors pushed back the timing of interest rate cuts by central banks. Bond yields rose in

Authorised Corporate Director's Report

January and February before recovering somewhat in March. Bond yields and bond prices move in opposite directions.

In general, both equities and bonds were weaker in April. This was mainly due to growing evidence of sticky US inflation, which raised questions as to whether the US Federal Reserve would be able to cut rates this year.

Shifting rate expectations led to US dollar strength versus most currencies, notably the Japanese yen, which hit a multi-decade low.

Against this backdrop, the fund delivered a positive return in the review period, and most share classes outperformed the fund's benchmark.

Our allocation to equities was the main driver of performance with exposure to global, UK, European, Japanese and other Asian stocks proving particularly beneficial.

Fixed income exposure also aided performance, albeit to a lesser extent. Developed market government bonds (principally long-dated US Treasuries, UK gilts and German bunds), corporate bonds and holdings in South African sovereign debt, all contributed to returns.

Investment activities

Early in the review period, we reduced our tactical position in South African government bonds and its currency, following the unwinding of an episode which we initiated before the start of the review period. We also added to global equity exposure in response to declines in prices caused by pressure from rising bond yields.

Later in November, we reduced long-dated fixed income exposure, in the US, UK and Germany, responding to a rapid decline in developed market government bond yields. This removed the capital added to the long-end in early October, before the start of the review period.

In early 2024, we added a new position in Chinese equities, responding to material price weakness, with valuations looking increasingly attractive in our view and price action increasingly episodic given the rapidity of declines. This position was scaled back in April, as

the strong absolute and relative performance since we invested, had unwound the most episodic price action.

Outlook

The concurrent weakness in bonds and equities (outside of China), could be suggestive that rising interest rates are becoming a worry for growth and/or discount rates once again.

However, sentiment remains relaxed in aggregate. Interest rate pressure is being interpreted as a cyclical rather than a structural issue, with language like 'stickiness' revealing the widespread faith that inflation will fall eventually.

Positive manufacturing data and improvements in China and Europe have also been supportive for already sanguine market beliefs about global growth.

Overall equity valuations look demanding in aggregate, although not detached from recent robust earnings/fundamentals. Overall, we favour equity exposure outside the US. Within fixed income, developed market bonds have the potential to offer portfolio insurance if growth disappoints, whilst emerging market sovereign bonds present attractive real and nominal yields. Cash real yields are elevated and attractive and uncorrelated with other asset classes. Its liquidity, provides flexibility to respond to tactical opportunities.

Financial statements and notes

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 4.

Distribution policy

In determining the amount available for distribution to Income shares, the annual charge is offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Authorised Corporate Director's Report

For the purposes of these financial statements, the Prospectus dated 26 April 2024 has been used.

Investment objective

The fund aims to provide a higher total return (the combination of capital growth and income) net of the ongoing charge figure, than the average return of the IA Flexible Investment Sector over any five-year period.

Investment policy

The fund is a multi-asset fund that invests at least 70% of its assets in other collective investment schemes in order to gain exposure to assets from anywhere in the world, including equities, fixed income, convertibles, cash, or near cash. The fund may also invest directly in these assets.

In aggregate, the fund will invest at least 70% of its assets in equities, either directly or via collective investment schemes.

Derivatives may be used for investment purposes, efficient portfolio management and hedging.

Investment approach

The fund manager's investment views are mainly implemented by investing in other funds. This will typically be via M&G's own funds, but the fund may also invest in funds managed by other companies where appropriate in order to best reflect the fund manager's investment views.

The fund manager has a flexible top-down approach to the allocation of capital between different types of assets in response to changes in economic conditions and asset values. This approach combines in-depth research to work out the value of assets over the medium to long term, with analysis of market reactions to events to identify investment opportunities. In particular, the fund manager seeks to respond when asset prices move away from a reasonable sense of 'fair' long-term value due to the market's reaction to events.

Benchmark

IA Flexible Investment Sector

The benchmark is a target which the fund seeks to outperform. The sector has been chosen as the fund's benchmark as the fund is a constituent of the sector. The benchmark is used solely to measure the fund's performance and does not constrain the fund's portfolio construction.

The fund is actively managed. The fund manager has complete freedom in choosing which investments to buy, hold and sell in the fund.

For each share class the benchmark will be denominated or hedged into the relevant share class currency. The benchmark for each share class will be shown in its respective KIID.

Risk profile

For details of the risks associated with this fund, please refer to the Prospectus.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Authorised Corporate Director's Report

Investment review

For the six months ended 30 April 2024

Performance against objective

Over the review period, the M&G Managed Growth Fund delivered a positive total return (the combination of capital growth and income) across all share classes, ahead of its target benchmark*, which is the IA Flexible Investment Sector average, which delivered 12.3% over the six months.

Over five years, the fund has delivered a positive total return across all share classes and has met its objective of delivering a higher total return, net of the ongoing charge figure, than the IA Flexible Investment Sector average over any five-year period. The benchmark returned 6.6% pa over five years.

* The benchmark prior to 1 September 2018 was the FTSE World Index. From 1 September 2018 it was a composite index comprising 85% MSCI ACWI Index and 15% Bloomberg Barclays Global Aggregate Index. From 9 December 2019 to 2 February 2021 the Bloomberg Barclays Global Aggregate Index was changed to the GBP-hedged version.

For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Financial highlights' section of this report.

Performance review

The six month period under review saw very strong equity market performance overall, with US, Japanese and European shares all registering double digit returns. In emerging markets, a notable laggard was China, as investors fretted over weakness in its economy. Bond markets also recorded positive returns, with investors favouring corporate and emerging market sovereign debt, over developed market government bonds.

The final two months of 2023, saw a powerful rally in bond and equity markets. Following encouraging inflation data and indications of a 'policy pivot' to rate cuts by the US Federal Reserve, the US 10-year Treasury yield fell sharply in November and December. Other core sovereign bond markets, including the UK and Germany also enjoyed significant rallies, as did emerging market sovereign bonds. The rebound in government bonds, together with increasing risk

appetite, was reflected in good performance from corporate bonds as well.

Alongside falling bond yields, equities also began to climb from late October as investor risk appetite improved and by the end of 2023, the MSCI AC World Index had recorded its best annual return since 2019.

However, the fortunes of equities and bonds diverged in the first quarter of 2024. While global equity markets recorded solid gains (partly driven by continued investor appetite for artificial intelligence-related stocks), the rally in bond markets at the end of 2023 faded, as investors pushed back the timing of interest rate cuts by central banks. Bond yields rose in January and February before recovering somewhat in March. Bond yields rise as bond prices fall.

In general, both equities and bonds were weaker in April. This was mainly due to growing evidence of sticky US inflation, which raised questions as to whether the US Federal Reserve would be able to cut rates this year.

Shifting rate expectations led to US dollar strength versus most currencies, notably the Japanese yen, which hit a multi-decade low.

Against this backdrop, the fund delivered a positive return over the period and outperformed its benchmark.

The fund is invested in other funds – typically those managed by M&G – providing exposure primarily to equities, and it was exposure to equity markets that drove the fund's positive return.

Four funds made significant contributions to performance – the M&G North American Value Fund, the M&G (Lux) Pan European Sustain Paris Aligned Fund, the M&G Global Sustain Paris Aligned Fund and the M&G Japan Fund.

The M&G North American Value Fund invests in cheap and out-of-favour companies, whose share price, in the opinion of the fund manager, does not reflect accurately the valuation of the business. The M&G (Lux) Pan European Sustain Paris Aligned and the M&G Global Sustain Paris Aligned Fund are funds that invest in companies that contribute towards climate change

Authorised Corporate Director's Report

goals. While the M&G Japan Fund primarily invests in Japanese companies. The performance of Japan's stockmarket in the period, was helped by the country's improving corporate governance, stronger profitability, attractive valuations and supportive monetary policy.

A fund that invests in US financial stocks was also a significant contributor to performance.

Investment activities

Early in the review period we sold a 3% position in long-dated US Treasuries which was added tactically in October (before the start of the review period), as well as a similar-sized position in US financials. These were replaced with a broad range of global equity exposure, including funds that invest in the UK, Asia ex Japan and globally.

In mid-February 2024, we added a 4% tactical position in the MSCI China, in response to episodic price declines and de-rating. This was funded by trimming positions in the M&G Global Sustain Paris Aligned Fund, the M&G Global Themes Fund and the M&G Japan Fund.

Towards the end of the first quarter of 2024, we closed a 5% holding in US financials and invested the proceeds in a mixture of cash and 30-year UK gilts. We scaled back our equity exposure following recent strong gains, which have compressed valuations and given investors an increased sense of comfort around the asset. We closed the US financials sector position as we felt valuations now more fairly reflected fundamentals in our view.

In April 2024, we closed the fund's 4% MSCI China position (which was added in mid-February) and invested the capital in global equities outside the US. Strong subsequent absolute and relative performance has unwound the most episodic price action, so we scaled back positions accordingly.

The majority of the fund remains invested in equities, which we believe will most likely be the primary driver of returns. The changes made over the review period have slightly increased the portfolio's cash balance,

giving more flexibility to respond to investment opportunities as they arise.

Outlook

The concurrent weakness in bonds and equities (outside of China), could be suggestive that rising interest rates are becoming a worry for growth and/or discount rates once again.

However, sentiment remains relaxed in aggregate. Rate pressure is being interpreted as a cyclical rather than a structural issue, with language like 'stickiness' revealing the widespread faith that inflation will fall eventually.

Positive manufacturing data and improvements in China and Europe have also been supportive for already sanguine market beliefs about global growth.

Overall equity valuations look demanding in aggregate, although not detached from recent robust earnings/fundamentals. Overall, we favour equity exposure outside the US. Within fixed income, developed market bonds have the potential to offer portfolio insurance if growth disappoints, whilst emerging market sovereign bonds present attractive real and nominal yields, in our view. Cash real yields are elevated and attractive and uncorrelated with other asset classes. Its liquidity, provides flexibility to respond to tactical opportunities.

Financial statements and notes

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 4.

Distribution policy

In determining the amount available for distribution to Income shares, the annual charge is offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Authorised Corporate Director's Report

For the purposes of these financial statements, the Prospectus dated 26 April 2024 has been used.

Investment objective

The fund aims to provide a total return (the combination of capital growth and income) of 4 to 8% per annum over any five-year period, net of the ongoing charges figure, while applying ESG criteria and/or impact criteria.

There is no guarantee that the fund will achieve a positive return over five years or any other period and investors may not get back the original amount they invested.

Investment policy

The fund is a multi-asset fund that typically invests directly across a range of asset classes, including equities, fixed income securities, convertibles, cash and near cash. Exposure to these assets may also be gained indirectly, via collective investment schemes (including funds managed by M&G) or derivatives. The fund may also invest indirectly in other asset classes such as property and gold.

The fund will typically invest 20-60% of its assets in equities and convertibles, 20-80% in fixed income securities or cash, and up to 20% in other assets. These allocations reflect the net exposure of the portfolio.

The fund invests in assets that meet the ESG criteria and/or impact criteria. This is achieved through the use of M&G's proprietary analysis and/or third party ESG information. Typically, the fund holds 20%-60% of its net asset value in positive impact assets. It always holds at least 20% of its net asset value in positive impact assets.

The following types of exclusions apply to the fund's direct investments:

- Norms-based exclusions: investments that are assessed to be in breach of commonly accepted standards of behaviour related to human rights, labour rights, environment and anti-corruption.

- Sector-based and/or values-based exclusions: investments and/or sectors exposed to business activities that are assessed to be damaging to human health, societal wellbeing, the environment, or otherwise assessed to be misaligned with the fund's sector-based and/or values-based criteria.
- Other exclusions: investments assessed to be otherwise in conflict with the ESG criteria and/or impact criteria.

References to 'assessed' above mean assessment in accordance with the ESG criteria and impact criteria document as referenced in the ESG Information section below. Further information on the exclusions applicable to the fund can be found in the Prospectus.

Collective investment schemes and derivatives may be subject to different ESG criteria and/or impact criteria than securities held directly. The fund manager will assess the suitability of such instruments relative to the fund's investment objective. If a derivative does not satisfy the ESG criteria and/or impact criteria, the fund may only invest via the instrument to take advantage of short-term market movements and to hedge currency exposures. It may also not be practicable to perform ESG analysis on cash and near cash to the same standards as other securities held directly.

The currency exposure of the fund will be actively managed, seeking to enhance returns, with a minimum of 70% of the fund exposed to sterling.

Derivatives may be used for investment purposes, efficient portfolio management and hedging.

Investment approach

The fund's approach to sustainable investment is through flexible asset allocation, whilst investing in securities issued by companies or governments that uphold high standards of environmental, social and governance behaviour as set out in the ESG criteria. In addition, the fund maintains a core holding of assets that have a positive societal impact through addressing

Authorised Corporate Director's Report

the world's major social and environmental challenges as set out in the impact criteria.

The fund manager has a flexible top-down approach to the allocation of capital between different types of assets in response to changes in economic conditions and asset values. This approach combines in-depth research to work out the value of assets over the medium to long term, with analysis of market reactions to events to identify investment opportunities. In particular, the fund manager seeks to respond when asset prices move away from a reasonable sense of 'fair' long-term value due to market reactions to events.

The fund seeks to manage risk by investing globally across multiple asset classes, sectors, currencies and countries. The fund's annualised volatility is expected to be between 4% and 7%, over any five-year period.

ESG information

Additional information is available to investors on the fund page on our website:

- ESG criteria and impact criteria: in the document titled 'M&G Sustainable Multi Asset Fund - ESG criteria and impact criteria' which includes the fund's exclusions approach.
- Periodic reporting about the fund's non-financial characteristics.

Benchmark

None

The fund is actively managed and it has no benchmark. Investors can assess the performance of the fund by its objective to provide a total return of 4 to 8% per annum over any five-year period. The fund's annual report for each financial year will include details of the fund's performance in relation to its objective.

Risk profile

For details of the risks associated with this fund, please refer to the Prospectus.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has changed during this period. From 1 November 2023 to 19 November 2023 the risk number was 4.

Investment review

For the six months ended 30 April 2024

Performance against objective

For the six months under review, the fund delivered a positive total return (the combination of income and capital growth) across all its share classes.

The fund's objective is to provide a combination of capital growth and income of 4-8% per annum, net of the ongoing charge figure over any five-year period, while applying environmental, social and governance (ESG) and impact criteria. Over five years, the fund has not met its objective; the annualised five-year return for the Sterling Class 'I' Accumulation share was 2.8% pa (net of fees).

For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Financial highlights' section of this report.

Performance review

Financial markets ended 2023 on the front foot as investors became increasingly confident with the notion that the peak in central bank interest rates had passed. The market's 'higher-for-longer' view on rates gradually

Authorised Corporate Director's Report

gave way as the final quarter progressed following a series of weaker economic data releases in the US and Europe and a shift in tone from the US Federal Reserve.

Nearly all asset classes in the fund delivered positive performance over this initial period, led by its broad-based equity exposure, capping a positive calendar year of performance for the fund overall. Holdings in the US tech equity space and some of our 'positive impact' equity investments registered impressive returns. The fund's exposure to fixed income assets, via a selection of developed market government bonds, also aided returns given the yields on these instruments fell from late October into the end of the year. UK gilts exposure was a valuable performance contributor here following our decision to increase our exposure to the asset class earlier in the year.

The fund went on to register a positive (but more measured) start to 2024 as investors toasted an improving economic growth outlook but a slowing disinflationary environment. As a result of this backdrop there was a significant reappraisal of interest rate cut expectations during the first few months of the year, but this was not enough to spoil rallies in most equity markets (with several equity indices reaching all-time highs). However, the performance of many government bond markets was more subdued as government bond yields began to climb higher once again.

The fund was able to register a small positive return through this period thanks to its broad equity exposure. Allocations to equities in the US, Denmark, Germany and Japan were leading contributors. Our investment approach tends to favour undervalued parts of the market and, from a fund point of view, it was encouraging to see some of these areas match or surpass US equity market strength. The fund's tactical exposure to Hong Kong/China equities was a valuable performance contributor as the country's equity market rebounded from downbeat economic news and widespread investor pessimism in 2023.

In the fixed income space, losses were mainly driven by the fund's diversified holdings of developed market government bonds and supranational bonds.

Unfortunately, the fund's exposure to listed green infrastructure assets continued to disappoint after a difficult 2023. While these income-producing assets made up only a small part of the portfolio, their price behaviour continued to largely reflect bond market fears of receding interest rate cut expectations. The fund has maintained a diverse range of holdings within its positive impact asset bucket. At the end of the reporting period, 58% of the fund was allocated to positive impact investments: those that aim to have a positive impact through actively addressing today's big environmental and social challenges. The overall score for the portfolio ended the period with an average MSCI ESG score of 7.7, which equates to an MSCI ESG rating of AA.

Investment activities

From a multi-asset portfolio point of view, it was encouraging to observe some signs of a decoupling between equity and bond price behaviour during the six months under review, particularly towards the end of the period.

We continued to try and take advantage of any valuation-led opportunities as they occurred. For example, a decision to add tactical exposure to Hong Kong/China equities in January rewarded the fund in the following months as Chinese markets bounced back from levels of market pessimism that felt detached from economic fundamentals.

Our optimism over the prospects for sectors such as clean energy remain undiminished and we took the opportunity to add to several names that stand to benefit from the green energy transition, including EDP Renováveis, Enphase Energy and Vestas Wind Systems.

In the bond space, the fund reduced its holdings of 5-year US Treasuries in favour of 30-year German bunds. Our view was that bunds would likely offer better diversification properties given the weaker economic prospects in Europe compared to the US.

In March, we recycled some names among the fund's positive impact equity holdings to reflect the latest recommendations from M&G's impact investing team.

Authorised Corporate Director's Report

Outlook

From a multi-asset portfolio perspective it has been encouraging to observe signs of a return to a decoupling in equity/bond price behaviour during this latest phase, as major equity indices continued to be resilient despite ongoing interest rate pressure. Developed market government bonds' recent sell-off generates both concern and opportunity. Strategically, it enhances their potential to provide portfolio insurance, so we're content to stay slightly long in the asset class, while acknowledging that news flow remains unsupportive for the time being.

In equities, aggregate valuations are demanding, though not detached from strong recent earnings/fundamentals. We favour markets where 'margins of safety' exist, notably in China and parts of Europe. We feel that valuation metrics still warrant a degree of caution with regard to the US.

Maria Municchi

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

As different share classes have different attributes, for example charging structures and minimum investments, please be aware that their performance may be different.

For additional information, including monthly fund commentaries, fund facts, historic prices, distribution rates, performance information (including a range of performance graphs) and other documents, please visit our website at mandg.com/investments

Long-term performance by share class

To give an indication of the performance of the fund, the following table shows the compound rate of return, per annum, over the period. Calculated on a price to price basis with income reinvested. Please refer to 'Comparative tables' for the share class launch dates.

Share class	Six months % ^a	Three years % pa	Five years % pa	Ten years % pa
Sterling				
Class 'A' Income	+8.7	-0.3	+2.5	n/a
Class 'A' Accumulation	+8.7	-0.3	+2.5	n/a

Financial statements and notes

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 4.

Distribution policy

In determining the amount available for distribution to Income shares, the annual charge is offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Authorised Corporate Director's Report

For the purposes of these financial statements, the Prospectus dated 26 April 2024 has been used.

Investment objective

The fund has two aims:

- To limit the average volatility to 12% per annum over any five-year period while providing a total return (the combination of capital growth and income) over that period; and
- To invest in assets which meet the fund's preferred ESG standards and/or those that provide a positive societal impact through addressing the world's major social and environmental challenges.

Investment policy

The fund invests globally across a range of asset classes, including equities and equity-related securities, fixed income securities, cash and near cash. Exposure to these assets is typically gained directly, but may also be gained indirectly, via funds (including funds managed by M&G) or derivatives. The fund may also invest to a limited extent indirectly in other asset classes such as property and gold.

Typically, the fund holds 20-60% of its net asset value in equities and equity related securities, but there is no obligation on the fund manager to hold a particular level of equity exposure.

The fund aims to exclude securities issued by:

- Companies that are assessed to be in breach of the United Nations Global Compact principles on human rights, labour rights, the environment and anti-corruption;
- Companies involved in the production of tobacco, alcohol, adult entertainment, controversial weapons, thermal coal, or the provision of gambling services;

- Companies that derive more than 10% of their revenue from the distribution of tobacco, unconventional oil and gas extraction, and the production or distribution of other weapons;
- Conventional oil and gas extraction companies that derive less than 40% of their revenue from activities related to natural gas extraction or renewable energy sources; and
- Electricity utilities companies that derive more than 10% of their power production from coal, more than 30% from oil and gas, or nuclear fuel sources. However, the fund may hold companies that have a clear business model of accelerating the transition to low-carbon power production, up to a maximum total limit of 5% of the fund's net asset value.

Where the fund invests directly, these investments meet the fund's ESG criteria or impact criteria:

- The ESG criteria are designed to consider key ESG risks and identify companies and governments which meet preferred standards of ESG behaviour.
- The impact criteria are designed to identify investments that have a positive societal impact. Typically, the fund holds 20%-50% of its net asset value in positive impact assets. It always holds at least 20% of its net asset value in positive impact assets and there is no cap on the level of positive impact exposure.

Further information on M&G's approach to ESG standards and exclusions and impact criteria can be found on our website: mandg.com/dam/investments/common/gb/en/documents/funds-literature/fund-specific-files/esg-literature/esg-criteria-sustainable-multi-asset-balanced-cautious-growth-fund.pdf

Indirect investments are not subject to the same ESG and/or impact restrictions as securities held directly. The fund manager will assess the suitability of such investments relative to the fund's non-financial objective. For further details please see our website.

The only investments that are not subject to assessment relative to the fund's non-financial

Authorised Corporate Director's Report

objective are: the use of derivatives to take advantage of short-term market movements and to hedge currency exposures, and cash.

The currency exposure of the fund will be actively managed, seeking to enhance returns, with a minimum of 70% of the fund exposed to sterling.

Derivatives may be used for investment purposes, efficient portfolio management and hedging.

Investment approach

The fund's approach to sustainable investment is to invest in securities issued by companies or governments that uphold high standards of ESG behaviour, as assessed using the fund's ESG criteria. In addition, the fund maintains a core holding of assets that have a positive societal impact, as assessed using the fund's impact criteria. As part of the investment process, the fund manager considers the long-term sustainability of assets, including carbon intensity and climate adaptability.

The fund manager's assessment of ESG criteria and impact criteria relies upon the use of third-party ESG information and/or proprietary analysis. Further information on M&G's approach to ESG standards and exclusions and impact criteria can be found on our website.

Volatility is managed by using research to estimate the variation in value and risk of different types of assets. The fund seeks to manage volatility and risk through flexible asset allocation, by investing globally across multiple asset classes, sectors, currencies and countries, in response to changes in economic conditions and asset values. This approach combines research to work out the anticipated value of assets over the medium to long term, with analysis of market reactions to events to identify investment opportunities.

The fund's volatility management objective may limit potential gains as well as losses.

Benchmark

IA Mixed Investment 20-60% shares sector

The benchmark is a comparator for the fund's financial objective against which the fund's financial performance can be measured. The sector has been chosen as the fund's benchmark as it reflects the financial aspects of the fund's investment policy. The comparator benchmark does not constrain the fund's portfolio construction.

The fund is actively managed. The fund manager has complete freedom in choosing which investments to buy, hold and sell in the fund within the constraints set by the fund's objective and investment policy.

An annual ESG and positive impact review to provide an assessment of the non-financial objective of the fund will be made available on our website.

Risk profile

For details of the risks associated with this fund, please refer to the Prospectus.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Authorised Corporate Director's Report

Investment review

For the six months ended 30 April 2024

Volatility against objective

It is not yet possible to measure the fund's volatility against its five-year volatility objective, which is to limit the average volatility to 12% per annum over any five-year period while providing a total return (the combination of capital growth and income) over that period, because the fund was only launched on 8 December 2020. Volatility over a shorter period is not reflective of the fund's objective and may sit outside the volatility limit that is set out in the fund's investment objective. We have a framework in place to monitor volatility on an ex-ante basis whilst the fund builds up enough history. Currently, the fund's volatility remains below its ceiling and has not exceeded it.

	Objective volatility over five year period % pa	Current volatility over one year (annualised) %
Sterling Class 'A' Acc shares	12.0	9.1

Performance against objective

Between 1 November 2023 (the start of the review period) and 30 April 2024, total returns for all share classes of the M&G Sustainable Multi Asset Balanced Fund fell short of the benchmark IA Mixed Investment 20-60% Shares sector's 9.5% gain.

For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Financial highlights' section of this report.

Performance review

For the six months under review, the fund delivered a positive total return (the combination of income and capital growth) across all its share classes.

Financial markets ended 2023 on the front foot as investors became increasingly confident with the notion that the peak in central bank interest rates had passed. The market's 'higher-for-longer' view on rates gradually gave way as the final quarter progressed following a series of weaker economic data releases in the US and Europe and a shift in tone from the US Federal Reserve.

Nearly all asset classes in the fund delivered positive performance over this initial period, led by its broad-based equity exposure, capping a positive calendar year of performance for the fund overall. Holdings in the US tech equity space and some of our 'positive impact' equity investments registered impressive returns. The fund's exposure to fixed income assets, via a selection of developed market government bonds, also aided returns given the yields on these instruments fell from late October into the end of the year. UK gilts exposure was a valuable performance contributor here, following our decision to increase our exposure to the asset class earlier in the year.

The fund went on to register a positive (but more measured) start to 2024 as investors toasted an improving economic growth outlook but a slowing disinflationary environment. As a result of this backdrop there was a significant reappraisal of interest rate cut expectations during the first few months of the year, but this was not enough to spoil rallies in most equity markets (with several equity indices reaching all-time highs). However, the performance of many government bond markets was more subdued as government bond yields began to climb higher once again.

The fund was able to register a small positive return through this period thanks to its broad equity exposure. Allocations to equities in the US, Denmark, Germany and Japan were leading contributors. Our investment approach tends to favour undervalued parts of the market and, from a fund point of view, it was encouraging to see some of these areas match or surpass US equity market strength. The fund's tactical exposure to Hong Kong/China equities was a valuable performance contributor as the country's equity market rebounded from downbeat economic news and widespread investor pessimism in 2023.

In the fixed income space, losses were mainly driven by the fund's diversified holdings of developed market government bonds and supranational bonds. Unfortunately, the fund's exposure to listed green infrastructure assets continued to disappoint after a difficult 2023. While these income-producing assets made up only a small part of the portfolio, their price

Authorised Corporate Director's Report

behaviour continued to largely reflect bond market fears of receding interest rate cut expectations.

The fund has maintained a diverse range of holdings within its positive impact asset bucket. At the end of the reporting period, 57% of the fund was allocated to positive impact investments: those that aim to have a positive impact through actively addressing today's big environmental and social challenges. The overall score for the portfolio ended the period with an average MSCI ESG score of 7.7, which equates to an MSCI ESG rating of AA.

Investment activities

From a multi-asset portfolio point of view, it was encouraging to observe some signs of a decoupling between equity and bond price behaviour during the six months under review, particularly towards the end of the period.

We continued to try and take advantage of any valuation-led opportunities as they occurred. For example, a decision to add tactical exposure to Hong Kong/China equities in January rewarded the fund in the following months as Chinese markets bounced back from levels of market pessimism that felt detached from economic fundamentals.

Our optimism over the prospects for sectors such as clean energy remain undiminished and we took the opportunity to add to several names that stand to benefit from the green energy transition, including EDP Renováveis, Enphase Energy and Vestas Wind Systems.

In the bond space, the fund reduced its holdings of 5-year US Treasuries in favour of 30-year German bunds. Our view was that bunds would likely offer better diversification properties given the weaker economic prospects in Europe compared to the US.

In March, we recycled some names among the fund's positive impact equity holdings to reflect the latest recommendations from M&G's impact investing team.

Outlook

From a multi-asset portfolio perspective it has been encouraging to observe signs of a return to a decoupling in equity/bond price behaviour during this

latest phase, as major equity indices continued to be resilient despite ongoing interest rate pressure.

Developed market government bonds' recent sell-off generates both concern and opportunity. Strategically, it enhances their potential to provide portfolio insurance, so we're content to stay slightly long in the asset class, while acknowledging that news flow remains unsupportive for the time being.

In equities, aggregate valuations are demanding, though not detached from strong recent earnings/fundamentals. We favour markets where 'margins of safety' exist, notably in China and parts of Europe. We feel that valuation metrics still warrant a degree of caution with regard to the US.

Maria Municchi

Fund manager

An employee of M&G FA Limited which is an associate of M&G Securities Limited.

Please note that the views expressed in this Report should not be taken as a recommendation or advice on how the fund or any holding mentioned in the Report is likely to perform. If you wish to obtain financial advice as to whether an investment is suitable for your needs, you should consult a Financial Adviser.

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

As different share classes have different attributes, for example charging structures and minimum investments, please be aware that their performance may be different.

For additional information, including monthly fund commentaries, fund facts, historic prices, distribution rates, performance information (including a range of performance graphs) and other documents, please visit our website at mandg.com/investments

Long-term performance by share class

To give an indication of the performance of the fund, the following table shows the compound rate of return, per annum, over the period. Calculated on a price to price basis with income reinvested. Please refer to 'Comparative tables' for the share class launch dates.

Share class	Six months % ^a	Three years % pa	Five years % pa	Ten years % pa

Financial statements and notes

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 4.

Distribution policy

In determining the amount available for distribution to Income shares, the annual charge is offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Authorised Corporate Director's Report

For the purposes of these financial statements, the Prospectus dated 26 April 2024 has been used.

Investment objective

The fund has two aims:

- To limit the average volatility to 9% per annum over any five-year period while providing a total return (the combination of capital growth and income) over that period; and
- To invest in assets which meet the fund's preferred ESG standards and/or those that provide a positive societal impact through addressing the world's major social and environmental challenges.

Investment policy

The fund invests globally across a range of asset classes, including equities and equity-related securities, fixed income securities, cash and near cash. Exposure to these assets is typically gained directly, but may also be gained indirectly, via funds (including funds managed by M&G) or derivatives. The fund may also invest to a limited extent indirectly in other asset classes such as property and gold.

Typically, the fund holds 0-35% of its net asset value in equities and equity-related securities, but there is no obligation on the fund manager to hold a particular level of equity exposure.

The fund aims to exclude securities issued by:

- Companies that are assessed to be in breach of the United Nations Global Compact principles on human rights, labour rights, the environment and anti-corruption;
- Companies involved in the production of tobacco, alcohol, adult entertainment, controversial weapons, thermal coal, or the provision of gambling services;

- Companies that derive more than 10% of their revenue from the distribution of tobacco, unconventional oil and gas extraction, and the production or distribution of other weapons;
- Conventional oil and gas extraction companies that derive less than 40% of their revenue from activities related to natural gas extraction or renewable energy sources; and
- Electricity utilities companies that derive more than 10% of their power production from coal, more than 30% from oil and gas, or nuclear fuel sources. However, the fund may hold companies that have a clear business model of accelerating the transition to low-carbon power production, up to a maximum total limit of 5% of the fund's net asset value.

Where the fund invests directly, these investments are required to meet the fund's ESG criteria or impact criteria:

- The ESG criteria are designed to consider key ESG risks and identify companies and governments which meet preferred standards of ESG behaviour.
- The impact criteria are designed to identify investments that have a positive societal impact. Typically, the fund holds 20%-50% of its net asset value in positive impact assets. It always holds at least 20% of its net asset value in positive impact assets and there is no cap on the level of positive impact exposure.

Further information on M&G's approach to ESG standards and exclusions and impact criteria can be found on our website at [mandg.com/dam/investments/common/gb/en/documents/funds-literature/fund-specific-files/esg-literature/esg-criteria-sustainable-multi-asset-balanced-cautious-growth-fund.pdf](https://www.mandg.com/dam/investments/common/gb/en/documents/funds-literature/fund-specific-files/esg-literature/esg-criteria-sustainable-multi-asset-balanced-cautious-growth-fund.pdf)

Indirect investments are not subject to the same ESG and/or impact restrictions as securities held directly. The fund manager will assess the suitability of such investments relative to the fund's non-financial objective. For further details please see our website.

The only investments that are not subject to assessment relative to the fund's non-financial

Authorised Corporate Director's Report

objective are: the use of derivatives to take advantage of short-term market movements and to hedge currency exposures, and cash.

The currency exposure of the fund will be actively managed, seeking to enhance returns, with a minimum of 70% of the fund exposed to sterling.

Derivatives may be used for investment purposes, efficient portfolio management and hedging.

Investment approach

The fund's approach to sustainable investment is to invest in securities issued by companies or governments that uphold high standards of ESG behaviour, as assessed using the fund's ESG criteria. In addition, the fund maintains a core holding of assets that have a positive societal impact, as assessed using the fund's impact criteria. As part of the investment process, the fund manager considers the long-term sustainability of assets, including carbon intensity and climate adaptability.

The fund manager's assessment of ESG criteria and impact criteria relies upon the use of third-party ESG information and/or proprietary analysis. Further information on M&G's approach to ESG standards and exclusions and impact criteria can be found on our website.

Volatility is managed by using research to estimate the variation in value and risk of different types of assets. The fund seeks to manage volatility and risk through flexible asset allocation, by investing globally across multiple asset classes, sectors, currencies and countries, in response to changes in economic conditions and asset values. This approach combines research to work out the anticipated value of assets over the medium to long term, with analysis of market reactions to events to identify investment opportunities.

The fund's volatility management objective may limit potential gains as well as losses.

Benchmark

IA Mixed Investment 0-35% Shares Sector

The benchmark is a comparator for the fund's financial objective against which the fund's financial performance can be measured. The sector has been chosen as the fund's benchmark as it reflects the financial aspects of the fund's investment policy. The comparator benchmark does not constrain the fund's portfolio construction.

The fund is actively managed. The fund manager has complete freedom in choosing which investments to buy, hold and sell in the fund within the constraints set by the fund's objective and investment policy.

An annual ESG and positive impact review to provide an assessment of the non-financial objective of the fund will be made available on our website.

Risk profile

For details of the risks associated with this fund, please refer to the Prospectus.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Authorised Corporate Director's Report

Investment review

For the six months ended 30 April 2024

Volatility against objective

It is not yet possible to measure the fund's volatility against its five-year volatility objective, which is to limit the average volatility to 9% per annum over any five-year period while providing a total return (the combination of capital growth and income) over that period, because the fund was only launched on 8 December 2020. Volatility over a shorter period is not reflective of the fund's objective and may sit outside the volatility limit that is set out in the fund's investment objective. We have a framework in place to monitor volatility on an ex-ante basis whilst the fund builds up enough history. Currently, the fund's volatility remains below its ceiling and has not exceeded it.

	Objective volatility over five year period % pa	Current volatility over one year (annualised) %
Sterling Class 'A' Acc shares	9.0	7.6

Performance against objective

Between 1 November 2023 (the start of the review period) and 30 April 2024, total returns for all share classes of the M&G Sustainable Multi Asset Cautious Fund fell short of the benchmark IA Mixed Investment 0-35% Shares sector's 7.3% gain.

For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Financial highlights' section of this report.

Performance review

For the six months under review, the fund delivered a positive total return (the combination of income and capital growth) across all its share classes.

Financial markets ended 2023 on the front foot as investors became increasingly confident with the notion that the peak in central bank interest rates had passed. The market's 'higher-for-longer' view on rates gradually gave way as the final quarter progressed following a series of weaker economic data releases in the US and Europe and a shift in tone from the US Federal Reserve.

Nearly all asset classes in the fund delivered positive performance over this initial period, led by its broad-based equity exposure, capping a positive calendar year of performance for the fund overall. Holdings in the US tech equity space and some of our 'positive impact' equity investments registered impressive returns. The fund's exposure to fixed income assets, via a selection of developed market government bonds, also aided returns given the yields on these instruments fell from late October into the end of the year. UK gilts exposure was a valuable performance contributor here following our decision to increase our exposure to the asset class earlier in the year.

The fund went on to register a positive (but more measured) start to 2024 as investors toasted an improving economic growth outlook but a slowing disinflationary environment. As a result of this backdrop there was a significant reappraisal of interest rate cut expectations during the first few months of the year, but this was not enough to spoil rallies in most equity markets (with several equity indices reaching all-time highs). However, the performance of many government bond markets was more subdued as government bond yields began to climb higher once again, and this began to detract from fund performance towards the end of the period.

There were notable contributions from equity allocations in the US, Denmark, Germany and Japan. Our investment approach tends to favour undervalued parts of the market and, from a fund point of view, it was encouraging to see some of these areas match or surpass US equity market strength. The fund's tactical exposure to Hong Kong/China equities was valuable as the country's equity market rebounded from downbeat economic news and widespread investor pessimism in 2023.

In the fixed income space, losses were mainly driven by the fund's diversified holdings of developed market government bonds and supranational bonds. Unfortunately, the fund's exposure to listed green infrastructure assets continued to disappoint after a difficult 2023. While these income-producing assets made up only a small part of the portfolio, their price

Authorised Corporate Director's Report

behaviour continued to largely reflect bond market fears of receding interest rate cut expectations. The fund has maintained a diverse range of holdings within its positive impact asset bucket. At the end of the reporting period, 61% of the fund was allocated to positive impact investments: those that aim to have a positive impact through actively addressing today's big environmental and social challenges. The overall score for the portfolio ended the period with an average MSCI ESG score of 7.7, which equates to an MSCI ESG rating of AA.

Investment activities

From a multi-asset portfolio point of view, it was encouraging to observe some signs of a decoupling between equity and bond price behaviour during the six months under review, particularly towards the end of the period.

We continued to try and take advantage of any valuation-led opportunities as they occurred. For example, a decision to add tactical exposure to Hong Kong/China equities in January rewarded the fund in the following months as Chinese markets bounced back from levels of market pessimism that felt detached from economic fundamentals.

Our optimism over the prospects for sectors such as clean energy remain undiminished and we took the opportunity to add to several names that stand to benefit from the green energy transition, including EDP Renováveis, Enphase Energy and Vestas Wind Systems.

In the bond space, the fund reduced its holdings of 5-year US Treasuries in favour of 30-year German bunds. Our view was that bunds would likely offer better diversification properties given the weaker economic prospects in Europe compared to the US.

In March, we recycled some names among the fund's positive impact equity holdings to reflect the latest recommendations from M&G's impact investing team.

Outlook

From a multi-asset portfolio perspective it has been encouraging to observe signs of a return to a decoupling in equity/bond price behaviour during this

latest phase, as major equity indices continued to be resilient despite ongoing interest rate pressure. Developed market government bonds' recent sell-off generates both concern and opportunity. Strategically, it enhances their potential to provide portfolio insurance, so we're content to stay slightly long in the asset class, while acknowledging that news flow remains unsupportive for the time being.

In equities, aggregate valuations are demanding, though not detached from strong recent earnings/fundamentals. We favour markets where 'margins of safety' exist, notably in China and parts of Europe. We feel that valuation metrics still warrant a degree of caution with regard to the US.

Maria Municchi

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

As different share classes have different attributes, for example charging structures and minimum investments, please be aware that their performance may be different.

For additional information, including monthly fund commentaries, fund facts, historic prices, distribution rates, performance information (including a range of performance graphs) and other documents, please visit our website at mandg.com/investments

Long-term performance by share class

To give an indication of the performance of the fund, the following table shows the compound rate of return, per annum, over the period. Calculated on a price to price basis with income reinvested. Please refer to 'Comparative tables' for the share class launch dates.

Share class	Six months % ^a	Three years % pa	Five years % pa	Ten years % pa
Sterling				
Class 'A' Income	+5.6	-2.1	n/a	n/a
Class 'A' Accumulation	+5.6	-2.1	n/a	n/a
Class 'I' Income	+5.8	-1.8	n/a	n/a
Class 'I' Accumulation	+5.7	-1.8	n/a	n/a
Class 'L' Accumulation	+5.8	-1.6	n/a	n/a
Class 'PP' Income	+5.8	-1.7	n/a	n/a
Class 'PP' Accumulation	+5.8	-1.7	n/a	n/a
Class 'R' Income	+5.6	-2.0	n/a	n/a
Class 'R' Accumulation	+5.6	-2.0	n/a	n/a
Benchmark	+7.3	-0.8	n/a	n/a

^a Not annualised.

Comparative tables

'Operating charges' is calculated as a percentage of average net asset value and represents an annual rate. Where there is a change in the charging structure, you may see variances in the 'operating charges' between the comparative and current period figures.

Financial statements and notes

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 4.

Distribution policy

In determining the amount available for distribution to Income shares, the annual charge is offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Authorised Corporate Director's Report

For the purposes of these financial statements, the Prospectus dated 26 April 2024 has been used.

Investment objective

The fund has two aims:

- To limit the average volatility to 17% per annum over any five-year period while providing a total return (the combination of capital growth and income) over that period; and
- To invest in assets which meet the fund's preferred ESG standards and/or those that provide a positive societal impact through addressing the world's major social and environmental challenges.

Investment policy

The fund invests globally across a range of asset classes, including equities and equity-related securities, fixed income securities, cash and near cash. Exposure to these assets is typically gained directly, but may also be gained indirectly, via funds (including funds managed by M&G) or derivatives. The fund may also invest to a limited extent indirectly in other asset classes such as property and gold.

Typically, the fund holds 55-100% of its net asset value in equities and equity-related securities, but there is no obligation on the fund manager to hold a particular level of equity exposure.

The fund aims to exclude securities issued by:

- Companies that are assessed to be in breach of the United Nations Global Compact principles on human rights, labour rights, the environment and anti-corruption;
- Companies involved in the production of tobacco, alcohol, adult entertainment, controversial weapons, thermal coal, or the provision of gambling services;

- Companies that derive more than 10% of their revenue from the distribution of tobacco, unconventional oil and gas extraction, and the production or distribution of other weapons;
- Conventional oil and gas extraction companies that derive less than 40% of their revenue from activities related to natural gas extraction or renewable energy sources; and
- Electricity utilities companies that derive more than 10% of their power production from coal, more than 30% from oil and gas, or nuclear fuel sources. However, the fund may hold companies that have a clear business model of accelerating the transition to low-carbon power production, up to a maximum total limit of 5% of the fund's net asset value.

Where the fund invests directly, these investments meet the fund's ESG criteria or impact criteria:

- The ESG criteria are designed to consider key ESG risks and identify companies and governments which meet preferred standards of ESG behaviour.
- The impact criteria are designed to identify investments that have a positive societal impact. Typically, the fund holds 20%-50% of its net asset value in positive impact assets. It always holds at least 20% of its net asset value in positive impact assets and there is no cap on the level of positive impact exposure.

Further information on M&G's approach to ESG standards and exclusions and impact criteria can be found on our website at mandg.com/dam/investments/common/gb/en/documents/funds-literature/fund-specific-files/esg-literature/esg-criteria-sustainable-multi-asset-balanced-cautious-growth-fund.pdf

Indirect investments are not subject to the same ESG and/or impact restrictions as securities held directly. The fund manager will assess the suitability of such investments relative to the fund's non-financial objective. For further details please see our website.

The only investments that are not subject to assessment relative to the fund's non-financial objective are: the use of derivatives to take advantage

Authorised Corporate Director's Report

of short-term market movements and to hedge currency exposures, and cash.

The currency exposure of the fund will be actively managed, seeking to enhance returns, with a minimum of 70% of the fund exposed to sterling.

Derivatives may be used for investment purposes, efficient portfolio management and hedging.

Investment approach

The fund's approach to sustainable investment is to invest in securities issued by companies or governments that uphold high standards of ESG behaviour, as assessed using the fund's ESG criteria. In addition, the fund maintains a core holding of assets that have a positive societal impact, as assessed using the fund's impact criteria. As part of the investment process, the fund manager considers the long-term sustainability of assets, including carbon intensity and climate adaptability.

The fund manager's assessment of ESG criteria and impact criteria relies upon the use of third-party ESG information and/or proprietary analysis. Further information on M&G's approach to ESG standards and exclusions and impact criteria can be found on our website.

Volatility is managed by using research to estimate the variation in value and risk of different types of assets. The fund seeks to manage volatility and risk through flexible asset allocation, by investing globally across multiple asset classes, sectors, currencies and countries, in response to changes in economic conditions and asset values. This approach combines research to work out the anticipated value of assets over the medium to long term, with analysis of market reactions to events to identify investment opportunities.

The fund's volatility management objective may limit potential gains as well as losses.

Benchmark

IA Flexible Investment Sector

The benchmark is a comparator for the fund's financial objective against which the fund's financial performance can be measured. The sector has been chosen as the fund's benchmark as it reflects the financial aspects of the fund's investment policy. The comparator benchmark does not constrain the fund's portfolio construction.

The fund is actively managed. The fund manager has complete freedom in choosing which investments to buy, hold and sell in the fund within the constraints set by the fund's objective and investment policy.

An annual ESG and positive impact review to provide an assessment of the non-financial objective of the fund will be made available on our website.

Risk profile

For details of the risks associated with this fund, please refer to the Prospectus.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Authorised Corporate Director's Report

Investment review

For the six months ended 30 April 2024

Volatility against objective

It is not yet possible to measure the fund's volatility against its five-year volatility objective, which is to limit the average volatility to 17% per annum over any five-year period while providing a total return (the combination of capital growth and income) over that period, because the fund was only launched on 8 December 2020. Volatility over a shorter period is not reflective of the fund's objective and may sit outside the volatility limit that is set out in the fund's investment objective. We have a framework in place to monitor volatility on an ex-ante basis whilst the fund builds up enough history. Currently, the fund's volatility remains below its ceiling and has not exceeded it.

	Objective volatility over five year period % pa	Current volatility over one year (annualised) %
Sterling Class 'A' Acc shares	17.0	10.5

Performance against objective

Between 1 November 2023 (the start of the review period) and 30 April 2024, total returns for all share classes of the M&G Sustainable Multi Asset Growth Fund fell short of the benchmark IA Mixed Flexible Investment sector's 12.3% gain.

For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Financial highlights' section of this report.

Performance review

For the six months under review, the fund delivered a positive total return (the combination of income and capital growth) across all its share classes.

Financial markets ended 2023 on the front foot as investors became increasingly confident with the notion that the peak in central bank interest rates had passed. The market's 'higher-for-longer' view on rates gradually gave way as the final quarter progressed following a series of weaker economic data releases in the US and Europe and a shift in tone from the US Federal Reserve.

Nearly all asset classes in the fund delivered positive performance over this initial period, led by its broad-based equity exposure, capping a positive calendar year of performance for the fund overall. Holdings in the US tech equity space and some of our 'positive impact' equity investments registered impressive returns. The fund's exposure to fixed income assets, via a selection of developed market government bonds, also aided returns given the yields on these instruments fell from late October into the end of the year. UK gilts exposure was a notable contributor here following our decision to increase our exposure to the asset class earlier in the year.

The fund went on to register a positive (but more measured) start to 2024 as investors toasted an improving economic growth outlook but a slowing disinflationary environment. As a result of this backdrop there was a significant reappraisal of interest rate cut expectations during the first few months of the year, but this was not enough to spoil rallies in most equity markets (with several equity indices reaching all-time highs). However, the performance of many government bond markets was more subdued as government bond yields began to climb higher once again.

The fund was able to register a small positive return through this period thanks to its broad equity exposure. Allocations to equities in the US, Denmark, Germany and Japan were leading contributors. Our investment approach tends to favour undervalued parts of the market and, from a fund point of view, it was encouraging to see some of these areas match or surpass US equity market strength. The fund's tactical exposure to Hong Kong/China equities was a valuable performance contributor as the country's equity market rebounded from downbeat economic news and widespread investor pessimism in 2023.

In the fixed income space, losses were mainly driven by the fund's diversified holdings of developed market government bonds and supranational bonds. Unfortunately, the fund's exposure to listed green infrastructure assets continued to disappoint after a difficult 2023. While these income-producing assets made up only a small part of the portfolio, their price

Authorised Corporate Director's Report

behaviour continued to largely reflect bond market fears of receding interest rate cut expectations. The fund has maintained a diverse range of holdings within its positive impact asset bucket. At the end of the reporting period, 50% of the fund was allocated to positive impact investments: those that aim to have a positive impact through actively addressing today's big environmental and social challenges. The overall score for the portfolio ended the period with an average MSCI ESG score of 7.8, which equates to an MSCI ESG rating of AA.

Investment activities

From a multi-asset portfolio point of view, it was encouraging to observe some signs of a decoupling between equity and bond price behaviour during the six months under review, particularly towards the end of the period.

We continued to try and take advantage of any valuation-led opportunities as they occurred. For example, a decision to add tactical exposure to Hong Kong/China equities in January rewarded the fund in the following months as Chinese markets bounced back from levels of market pessimism that felt detached from economic fundamentals.

Our optimism over the prospects for sectors such as clean energy remain undiminished and we took the opportunity to add to several names that stand to benefit from the green energy transition, including EDP Renováveis, Enphase Energy and Vestas Wind Systems.

In the bond space, the fund reduced its holdings of 5-year US Treasuries in favour of 30-year German bunds. Our view was that bunds would likely offer better diversification properties given the weaker economic prospects in Europe compared to the US. In March, we recycled some names among the fund's positive impact equity holdings to reflect the latest recommendations from M&G's impact investing team.

Outlook

From a multi-asset portfolio perspective it has been encouraging to observe signs of a return to a decoupling in equity/bond price behaviour during this latest phase, as major equity indices continued to be

resilient despite ongoing interest rate pressure. Developed market government bonds' recent sell-off generates both concern and opportunity. Strategically, it enhances their potential to provide portfolio insurance, so we're content to stay slightly long in the asset class, while acknowledging that news flow remains unsupportive for the time being.

In equities, aggregate valuations are demanding, though not detached from strong recent earnings/fundamentals. We favour markets where 'margins of safety' exist, notably in China and parts of Europe. We feel that valuation metrics still warrant a degree of caution with regard to the US.

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

As different share classes have different attributes, for example charging structures and minimum investments, please be aware that their performance may be different.

For additional information, including monthly fund commentaries, fund facts, historic prices, distribution rates, performance information (including a range of performance graphs) and other documents, please visit our website at mandg.com/investments

Long-term performance by share class

To give an indication of the performance of the fund, the following table shows the compound rate of return, per annum, over the period. Calculated on a price to price basis with income reinvested. Please refer to 'Comparative tables' for the share class launch dates.

Share class	Six months % ^a	Three years % pa	Five years % pa	Ten years % pa
Sterling				
Class 'A' Income	+11.4	+1.3	n/a	n/a
Class 'A' Accumulation	+11.4	+1.3	n/a	n/a
Class 'I' Income	+11.6	+1.6	n/a	n/a
Class 'I' Accumulation	+11.6	+1.6	n/a	n/a
Class 'L' Accumulation	+11.7	+1.8	n/a	n/a
Class 'PP' Income	+11.6	+1.7	n/a	n/a
Class 'PP' Accumulation	+11.6	+1.7	n/a	n/a
Class 'R' Income	+11.5	+1.4	n/a	n/a
Class 'R' Accumulation	+11.4	+1.4	n/a	n/a
Benchmark	+12.3	+2.2	n/a	n/a

^a Not annualised.

Comparative tables

'Operating charges' is calculated as a percentage of average net asset value and represents an annual rate. Where there is a change in the charging structure, you may see variances in the 'operating charges' between the comparative and current period figures.

Financial statements and notes

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 4.

Distribution policy

In determining the amount available for distribution to Income shares, the annual charge is offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.
