Prudential Risk Managed Passive range – availability

It's possible to invest in the Prudential Risk Managed Passive range through a number of products, and, as an Open Ended Investment Company (OEIC), from a range of fund “platforms” such as Cofunds, Fidelity FundsNetwork, Transact and more.

	Prudential Retirement Account	International Portfolio Bond	OEIC	ISA*	Prudential Investment Plan	Flexible Retirement Plan (Personal Pension & Drawdown)	Trustee Investment Plan	Prudential International Investment Bond
Risk Managed Passive 1	✓	✓	✓	✓	✓	✓	✓	✓
Risk Managed Passive 2	✓	✓	✓	✓	✓			
Risk Managed Passive 3	✓	✓	✓	✓	✓	✓		✓
Risk Managed Passive 4	✓	✓	✓	✓	✓			
Risk Managed Passive 5	✓	✓	✓	✓	✓			

* The Prudential ISA is provided by Link Financial Investments Limited, the ISA Plan Manager. Link Financial Investments Limited is responsible for all the regulatory and legal aspects of the ISA and the provision of customer services.

This Quarterly Update describes the asset allocations and fund aims of the OEIC versions of these funds. This fund type is distinguished from the Unit-Linked versions, that invest exclusively in the OEIC funds, by the prefix 'LF' in their full name as in 'LF Risk Managed Passive 1' for example.

If you invest or hold these funds in a Pension, Life or International policy you may have the Unit-Linked version that doesn't have the 'LF' prefix. Instead it will simply say 'Prudential' (for Pension and Life funds) as in 'Prudential Risk Managed Passive 1' for example. International funds will have the prefix 'PIA' in their title.

The Unit-Linked versions generally have a slightly larger proportion of their holdings in cash and may have different charging and taxation costs. This will mean their investment performance will be different to their OEIC equivalent.

Your product literature will help you identify which version of the fund you may hold. Or alternatively ask your financial adviser for more information.

M&G Treasury & Investment Office (T&IO) – market update*

- T&IO are our in-house investment strategists and “manager of managers”
- They are a well-resourced team that includes experienced investment professionals with specialist expertise in capital markets research, investment strategy design, liability management, portfolio management and manager selection and oversight.
- T&IO are responsible for approximately £175 billion AUM, as at 31st December 2021, across a range of multi-asset investment solutions.

In this section T&IO give their thoughts on current market conditions. This commentary reflects the general views of T&IO and should not be taken as recommendation or advice as how any specific market is likely to perform. If there is information or terminology included in the commentary that you would like to discuss, then please contact your financial adviser.

Economic view

The relatively mild infection produced by the dominant Omicron COVID-19 variant meant that many economies were able to reduce restrictions and move towards fully reopening during the quarter, aiding global economic growth. However, in China, strict COVID-19 curbs and continued uncertainty in its property sector hampered economic activity in the country somewhat. The price rises seen on many goods and services globally over the past year continued during the period, a problem that was exacerbated by Russia’s military invasion of Ukraine in late February. The conflict sent prices in energy markets (oil and gas) and other key commodity markets soaring as production shutdowns and international sanctions began to hit the Russian economy. Global economic activity began to be negatively affected, particularly in Europe where many nations rely on Russian gas supplies. The US Federal Reserve and the Bank of England both raised interest rates in response to the ongoing inflationary environment.

The economic picture remains uncertain however, we continue to believe that there are long-term opportunities available for the careful investor.

* M&G Investment Management Ltd (MAGIM), part of the M&G plc Group, are the investment managers for the Risk Managed Passive range. They make the fund selections and asset allocations adjustments recommended by T&IO.

Equities

The UK stockmarket, led by the FTSE 100 larger companies index, proved to be remarkably resilient in a difficult start to the year, ending just in positive territory for a sixth-successive quarter and ahead of the major regional equity markets in local currency terms. The dominant events were the crisis in Ukraine and swingeing sanctions on Russia. Risk appetite improved as the two sides met for peace talks.

US stockmarkets fell, with falls led by the technology-dominated Nasdaq, although losses were reduced by strong rallies late in March.

The war in Ukraine and its consequences weighed heavily on European equities. They fell and lagged other major markets and regions. Concerns about inflation, which was driven in part by surging commodities prices after Russia invaded Ukraine, and rising interest rates dampened investor sentiment.

The Japanese stockmarket fell and lagged the MSCI World Index. Asia Pacific ex Japan performed broadly in line with other markets around the world, although once again its largest constituent market, China, performed poorly.

Our view remains that a broadly diversified portfolio of equities will benefit overall returns over the long-term.

Fixed Interest

It was a volatile period for fixed income markets, initially driven by concern that interest rates would need to be increased more aggressively to tackle surging inflation. The invasion of Ukraine became the dominant theme with a surge in wheat and energy prices expected to put even further pressure on inflation. Against this backdrop, UK government bonds (gilts) delivered negative returns as the 10-year gilt yield climbed above 1.7%, reaching its highest level in since 2016. UK corporate bonds were also in negative territory with the downturn in risk appetite leading to weakness across credit markets.

Global fixed income markets underperformed across the board as investors worried about inflation and increasingly hawkish central bank rhetoric before events in Eastern Europe cooled the lure for risk assets almost completely.

Over the long-term, we continue to favour corporate bonds over government bonds

Overview

The portfolio manager continues to maintain an overweight to listed alternatives and added a small overweight position in US equities in December. Similar overweight positions have been added to UK and European equities in the early part of 2022 funded by cash and European investment grade assets.

Risk Managed Passive 1

Portfolio Information, as at 31 March 2022, for the collective fund (an Open Ended Investment Company or OEIC)

Fund Size: £330,013,011

Objective

To achieve long-term (in excess of 5 years) total return (the combination of income and growth of capital) by investing in a mix of assets from around the world and aims to limit the average volatility (the amount by which the fund's value increases or decreases), per annum over rolling 5 year periods to 9%. There is no guarantee that the objective will be met over any time period and at any time the actual volatility may be higher or lower than 9%. You may get back less than you invest.

Performance

All figures sourced from FE fundinfo. Please note that all performance figures for Prudential Funds are net of Annual Management Charge (AMC) and other fund charges where applicable. They take no account of any product charges that may be applicable. Any product charges will have the effect of reducing the figures shown below.

Performance figures can vary between each of these funds due to different taxation rules and fund level charges. The Life, Pension and Prudential International funds can also hold an element of cash due to the short delay between new investments being received by these funds and being placed in the underlying OEIC portfolio fund, and this may also have an impact on the performance of these funds when compared to the underlying OEIC fund.

OEIC Funds	31/03/21 – 31/03/22 (%)	31/03/20 – 31/03/21 (%)	31/03/19 – 31/03/20 (%)	31/03/18 – 31/03/19 (%)	31/03/17 – 31/03/18 (%)

PIA Risk Managed Passive 3	0.4	19.2	-6.6	2.6	0.9

The fund performance figures above are based on the movement of the daily price. They're on a total return basis with gross income reinvested and Series B funds.

We can't predict the future. Past performance isn't a guide to future performance. The value of your investment can go down as well as up so you might get back less than you put in.

Glossary

This glossary is a high-level guide to some of the technical terminology that may appear in our Quarterly Summary. It is not intended to be definitive reference document and you should contact your adviser for further assistance where necessary.

Alternative Assets

These may include non-traditional, complex or specialist investments. Examples include hedge funds, private equity and complex derivative based strategies.

Basic Materials Sector

A category of stocks covering companies involved with the discovery, development and processing of raw materials. The basic materials sector includes the mining and refining of metals, chemical producers and forestry products.

“Blue Chip” Companies

These are large, reputable companies which are thought to be financially sound.

Bonds

See Fixed Interest Securities.

“Boutique Managed” Funds

Investment funds that are specialised in some way either through the expertise needed to manage the portfolio or because it has an unusual theme or a collection of funds under one house. These “boutique” funds are typically offered by smaller, specialist firms as opposed to large investment management companies.

Broad Investment Grade

This is a term used to describe a listing of bonds and fixed income instruments on an index. It is used to measure the overall value of a collective group of bonds and represents the characteristics of these types of securities. It is a grading level that can be used by certain types of funds for determining assets that are suitable for investment into a fund.

Certificates of Deposit

These are money market investments that are generally issued by banks against a security. A certificate of deposit usually pays interest (which can vary) and entitles the bearer to receive a set interest rate up until a set maturity date and can be issued in any currency or denomination.

Closed Ended Funds

This describes a collective investment scheme which has a limited number of shares (or units). The shares are then traded on an exchange or directly through the fund manager to create a secondary market subject to market forces.

Collective Investment Schemes

A way of pooling investment with others as part of a single investment fund. This allows investors to participate in a wider range of investments than would normally be feasible if investing individually and to share the costs and benefits of doing so. Collective Investment Schemes, OEICs, Unit Trusts, Mutual funds, usually either target geographic regions (like emerging market countries) or specific themes (like technology or property).

Convertible Bonds (can also be called Deferred Equity)

These are corporate bonds that are exchangeable for a set number of another form of investment (for example, common shares) at a pre-stated price. Convertible bonds typically pay a lower income than is normally available from common bonds.

Corporate Bonds

These are loans to companies where the purchaser of the corporate bond lends money to the company in return for regular interest payments and the promise that the initial sum will be repaid on a specified later date.

Default Risk

This is the possibility that the issuer of a bond will be unable to make payments when they are due.

Derivatives

These cover products such as futures and options which are generally an arrangement to buy or sell a standard quantity of a specified asset on a fixed future date at a price agreed today. Also considered to be a financial instrument whose value is dependent upon the value of an underlying asset.

Equities

These are also known as shares or stocks and represent a share of the ownership of a company. Shares give two potential benefits – the share prices increase as the value of the company increases and regular payments, known as dividends, may be made to shareholders based on how well the company is doing. However, share prices can also go down, therefore there may not be dividends.

Eurobonds

A Eurobond is an international bond that is denominated in a currency not native to the country where it is issued. It can be categorized according to the currency in which it is issued. For example, a British company may issue a Eurobond in Germany, denominating it in U.S. dollars.

Exchange-Traded Fund

This is an investment vehicle the units of which are traded on a stock exchange. An exchange traded fund can hold a range of assets such as stocks, bonds or even commodities. Most track an index.

Fixed Interest Securities

These are more commonly known as “bonds” and are loans issued by companies or by governments in order to raise money. Bonds issued by companies are called corporate bonds, those issued by the UK government are called gilts and those issued by the US government are called treasury bonds. In effect all bonds are IOUs that promise to pay a sum on a specified date and pay a fixed rate of interest along the way.

Floating Rate Notes

These are basically short-term loans to financial organisations, such as banks, under which the investor receives interest payments from that financial organisation. At the end of an agreed period the financial organisation has to repay the loan.

The interest payment rates are linked to a specified “floating” rate. In legacy instruments, this was typically the London Interbank Offered Rate (LIBOR) though post cessation of LIBOR, these are being replaced by use of alternative rates such as the Sterling Overnight Index Average (SONIA). This means that interest rate payments may go up or down.

Forwards Contract (or Forwards)

These are agreements between two parties to buy or sell an asset at a fixed future date for a price determined at the time of dealing.

Government Bonds

These are loans to the government where the purchaser of the government bond lends money to the government in return for regular interest payments and the promise that the initial sum will be repaid on a specified later date.

Government Sovereign Bond

Is a government debt issued in a foreign currency.

Hedging

A strategy employed in order to reduce or mitigate risk. Hedging involves making an offsetting transaction in one market in order to protect against possible losses in another.

Hedged Back to Sterling

This is a specific example of hedging where the trader is trying to protect an existing or anticipated position from an unwanted move in sterling exchange rates.

Index-Linked Securities

Are similar to fixed interest securities but the payments out are normally increased by a price index e.g. for UK government index-linked securities, payments out are increased in line with the UK Retail Price Index.

Investment Grade

A credit rating given to a government or corporate bond that indicates that the agency giving the rating (e.g. Standard & Poors) believes that the issuer has a relatively low risk of default. Bonds with credit ratings of AAA, AA, A or BBB are considered investment grade. Low rated bonds with ratings of BB or below are often called Junk Bonds.

Money Market Investments

Are defined as cash and near cash such as bank deposits, certificates of deposits, fixed interest securities or floating rate notes, with, where applicable, a maturity date of under a year.

OEIC

This is an Open Ended Investment Company. Like all open collective Investment Schemes, an OEIC has no fixed amount of capital.

The total value of the OEIC is equally divided into shares which will vary in price and in the number issued. Each time that new money is invested, new shares or units are created to match the prevailing share price; each time shares are redeemed, the assets sold match the prevailing share price.

Options

Legal agreements that give the holder the right (but not the obligation) to buy or sell the underlying asset at an expiration date, at a price determined at the time of dealing.

Permanent Interest Bearing Shares (usually referred to as PIBS)

These are fixed-interest securities issued by building societies. Building societies use them in the way public limited companies would use preference shares (see below). Although similar to bonds, PIBS typically exist as long as their issuer does. They typically offer better interest rates than bonds although unlike bonds have no fixed redemption date and so redemption value will be determined by market values at the time of sale. PIBS are not covered by UK government compensation schemes. If the building society is in financial distress, mounts are paid to holders of PIBS only after depositors.

Preference Shares (also called Preferred Stock or Preferred Shares)

These are shares in a company which give their holders an entitlement to a fixed dividend payment and may or may not carry voting rights. These are a 'higher ranking' stock than common stock and usually have specific rights attached to them. Preference shares mean that the holder may get preferred treatment over common share holders – and carry a dividend that is paid out prior to dividends to common share holders. In the event of bankruptcy preferred share holders will be paid out from assets before common share holders and after debt holders.

Primary Industry

The industrial sector of an economy involved in the extraction and collection of natural resources, such as copper and timber, as well as by activities such as farming and fishing. A company in a primary industry can also be involved in turning natural resources into products. Primary industries tend to make up a larger portion of the economy of developing countries than they do for developed countries.

Regulated

This means the portfolio or fund has to conform to the regulations laid down by the financial authority of the country it is trading in (i.e. in the UK, the FCA protects the investor and provides structure around the products, financial services providers and markets).

Reverse Repurchase Agreement

A Reverse Repurchase Agreement is a legal contract with a bank, under which securities are purchased (for example, UK Government Bonds or Gilts) from the bank, with an agreement to sell them back to the same bank at a higher price at a specific date in the future.

Risk

Risk can take on many forms. In the context of investment management it is a term used to indicate the chance of losing or gaining money on your investment. It's usually measured by a statistical measurement called 'standard deviation' this is calculated based on movements (both up & down) from the investment or funds average return.

Secondary Industry

The industrial sector of an economy that produces finished, usable products. Unlike a primary industry, which collects and produces raw materials for manufacture, a secondary industry makes products that are more likely to be consumed by individuals. Examples of secondary industry divisions include automobile manufacturing, steel production and telecommunications.

Shares

See Equities.

Short-Term Government Bonds

For the purposes of determining assets which the Prudential Cash Funds can invest in these are defined as government bonds with a repayment period of twelve months or less.

Smaller Companies

Companies quoted on a recognised exchange that have a market worth below that of blue chip companies.

Sterling Overnight Index Average (SONIA)

Is an interest rate that is published and administered by the Bank of England who are responsible for its governance and publication every London business day.

SONIA is based on actual transactions and reflects the average of the interest rates that banks pay to borrow sterling overnight from other financial institutions and other institutional investors.

Transferable Securities

This is a descriptor given to a type of financial security which is traded on capital markets. The term is probably most commonly known and used in association with UCITS in UK and Europe (examples would be UCITS/some types of warrants).

Undertakings for Collective Investment in Transferable Securities (UCITS)

These are collective investments which can be sold across national borders within the EU having complied with regulations on investments and administration.

Unregulated

This means the portfolio or fund does not need to conform to regulations.

Warrants

A warrant is a security that entitles the holder to buy shares in the issuing company at a specified price and within a certain time frame.

Warrants are freely transferable and traded on major exchanges. Their value will go up or down as the price of the shares to which they relate goes up or down.
